

Curiosity PIC32MZ EF 2.0 Development Board User's Guide

Introduction

The Microchip Technology Curiosity PIC32MZ EF 2.0 Development Board (DM320209) includes an integrated programmer and debugger, hence additional hardware is not required to get started. Users can expand functionality through MikroElektronika mikroBUS™ Click™ adapter boards, add Ethernet connectivity with the Microchip PHY Daughter Board, add Wi-Fi® connectivity capability using the Microchip expansions boards, and add audio input and output capability with Microchip audio daughter boards.

With or without expansion boards, the Curiosity PIC32MZ EF 2.0 Development Board provides the freedom to develop a variety of applications, including Bluetooth Audio, CAN, Graphics/UI, Internet of Things (IoT), robotics development, and proof-of-concept designs.

Curiosity PIC32MZ EF 2.0 Development Board Features

The Curiosity PIC32MZ EF 2.0 Development Board has the following features:

- PIC32MZ2048EFM144, 200 MHz, 2 MB Flash, 512 Kb SRAM
- On-Board debugger (PKoB4)
 - Real time Programming & Debugging
 - Virtual COM port (VCOM)
 - Data Gateway Interface (DGI)
- Two mikroBUS interfaces
- Two X32 Audio interfaces supporting Bluetooth® and Audio
- Ethernet interface
- Graphics interface
- Xplained pro extension compatible interface
- CAN interface
- User buttons
- User LEDs
- 8 MB QSPI memory
- Arduino Uno R3 compatible interface

Kit Contents

The kit contains one Curiosity PIC32MZ EF 2.0 Development Board (DM320209).

Note: If any part is missing from the kit, contact a Microchip sales office for assistance. A list of Microchip offices for sales and service is provided on the last page of this document.

1.3 Power Block Diagram

The following figure shows a block diagram of the power system on the Curiosity PIC32MZ EF 2.0 Development Board. The Curiosity PIC32MZ EF 2.0 Development Board has several power sub systems that allow it to accept up to 16V. The barrel jack is a 2.1 mm center positive connector. The power in can also be connected through the Arduino header, this input is before the reverse voltage protection.

1.4 PICKit On-Board 4

The MPLAB® PICKit™ On-Board 4 (PKoB4) is a new generation of In-Circuit Debugger. The MPLAB PKoB4 programs faster than its predecessor, and is designed to use a high-speed 2.0 USB interface and provide a feature rich debugging experience through one USB cable. The PKoB4 is intended to support programming debugging and a Data Gateway interface.

The MPLAB PKoB4 In-Circuit Debugger is compatible with these platforms:

- Microsoft Windows® 7 or later version
- Linux®
- macOS™

The MPLAB PKoB4 In-Circuit Debugger system provides the following advantages:

Features and Capabilities:

- Connects to computer through high-speed USB 2.0 (480 Mbits) cable
- Programs devices using MPLAB X IDE or MPLAB Integrated Programming Environment (IPE)
- Supports multiple hardware and software breakpoints, stopwatch, and source
- Code file debugging
- Debugs user application in real time
- Sets breakpoints based on internal events
- Monitors internal file registers
- Debugs at full speed
- Configures pin drivers
- Field-upgradeable through an MPLAB X IDE firmware download
- Adds new device support and features by installing the latest version of MPLAB X IDE (available as a free download at www.microchip.com/mplabx/)
- Indicates debugger status through on-board LEDs

Performance and Speed:

- More and faster memory
- A Real-Time Operating System (RTOS)
- No firmware download delays incurred when switching devices
- A 32-bit MCU running at 300 MHz

1.4.1 Recovery Method

When MPLAB PICKit On-Board 4 is not responding, users can recover it by following these steps:

1. With the Curiosity PIC32MZ EF 2.0 Development Board is still powered, short the two pads for approximately 10 seconds, see figure below.

Figure 1-4. Location of Pads to Short

2. Open the latest version of MPLAB X IDE.
3. From Debug, select Hardware Tool Emergency Boot Firmware Recovery.

Figure 1-5. Debugging Window

4. Follow the instructions prompted on the screen to bring the tool back to the factory conditions.

For additional information on PKoB4, refer to the “MPLAB® PICkit™ 4 In-Circuit Debugger User’s Guide” (DS50000251), which is available for download at <http://ww1.microchip.com/downloads/en/DeviceDoc/MPLAB%20PICkit%204%20ICD%20Users%20Guide%20DS50002751C.pdf>.

1.5 I²C Voltage Selection

The I²C voltage is defaulted to 3.3V pull ups. A 5.0V option is possible, to do this the trace must be cut and a resistor of 0 ohm or a bus bar must be installed. A 0805 SMD footprint has been provided, which can be located on the back side of the board.

The following figure shows the I²C jumper in the trace:

Figure 1-6. I²C Jumper

The following figure shows the schematic representation:

Figure 1-7. Schematic Representation

1.6 X32 Audio Interface

The X32 audio interface is a 32-pin interface to the board which supports audio codec, DACs, and Bluetooth® radios. The X32 audio interface has audio supply I²S, other control lines, and data interfaces.

1.6.1 Block Diagram

The Curiosity PIC32MZ EF 2.0 Development Board has two X32 interfaces that share two I²S signals. The following figure shows the relation between the I²S signals and the X32 daughter board interface.

Figure 1-8. X32 Interface Block Diagram

1.6.2 Pinout

The following table shows the pinout and description for the X32 Audio interface. Refer to the Schematics for additional information.

1.7.1 Port Connections

The following table provides the port connections to the mikroBUS interface. The mikroBUS is nested inside of the X32 Audio interface. Due to mechanical interference, a mikroBUS or Audio interface can be used in the same socket.

The mikroBUS interface shares signals with the X32 Audio interface, refer to [Pinout](#) for additional information on pinout or signal probing.

1.8 Control Area Network (CAN) Bus Interface

The Curiosity PIC32MZ EF 2.0 Development Board provides access to a CAN interface that is post transceiver. The on-board CAN transceiver is an ATA6561, which allows the application to be used with any CAN bus compliant interface.

1.9 Ethernet

The Curiosity PIC32MZ EF 2.0 Development Board has a modular Ethernet PHY system that enables different PHYs to be plugged into the board. This interface is set up to use a Reduced Media-Independent Interface (RMII interface) and a SPI bus interface with GPIO.

Figure 1-9. Ethernet PHY Header Configuration

1.10 Xplained Pro Extension Standard Header

The Curiosity PIC32MZ EF 2.0 Development Board has an Xplained Pro extension compatible interface that enables using the existing extension boards. This interface consists of a dual row, 20-pin, 100 mil, 90 degree extension male header. Xplained Pro extensions have their female counterparts. The extension headers can be used to connect a variety of Xplained Pro extension boards or to access the pins of the target MCU directly. All connected pins follow the defined pinout description as shown in the following table.

Note: All pins are not always connected.

1.13 USB

The Curiosity PIC32MZ EF 2.0 Development Board has a high-speed USB 2.0 connection for user application. This port can act as a device class or host class.

For device class, use the USB cable which can be plugged into the target USB. Refer to [1.1 Board Feature Location](#) for additional information.

For host class, a USB OTG cable is needed. To enable power from the Curiosity PIC32MZ EF 2.0 Development Board, the user must control the VBUS Enable pin. The Curiosity PIC32MZ EF 2.0 Development Board must be powered through an external source, Vin, PKoB4, or barrel jack.

2.3 Board Dimensions

2.4 Hardware Revision History

Rev 1.0

Known issue: J407 and J408 in Arduino header section are 180 degrees out. Arduino Headers will not be compatible with shields.

Rev 2.0

J407 and J408 are corrected to work with Arduino header interface.

3. Revision History

Revision B - February 2021

Added a new section titled [Hardware Revision History](#) to detail updates that have been done to the board.

Revision A - July 2019

This is the initial release of this document.

The Microchip Web Site

Microchip provides online support via our web site at www.microchip.com/. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

Customer Change Notification Service

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at www.microchip.com/. Under "Support", click on "Customer Change Notification" and follow the registration instructions.

Customer Support

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or Field Application Engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: www.microchip.com/support

Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Quality Management System Certified by DNV

ISO/TS 16949

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
